EDUCATION

Northeastern University, Boston, MA

May 2022

Khoury College of Computer Sciences

GPA: 3.75/4.00

Candidate for Bachelor of Science in Computer Science & Business Administration (Finance)

Minor in Mathematics

Relevant Courses: Algorithms and Data, Object Oriented Design, Linear Algebra, Computer Systems, Database Design

Honors and Awards: Dean's List, International Scholar, Top 10/Best Rookie Award at Hack Beanpot 2019

COMPUTER KNOWLEDGE

Languages: Java, JavaScript (NodeJS, React), Go, SQL, Python, C, HTML, CSS

Tools/Libraries: Docker, Firebase, Google Cloud (Firestore, Functions, Storage), JUnit, Kubernetes, Unix, NumPy, pandas

Miscellaneous: Git, GitHub, JSON, npm, RESTful APIs, XML, YAML

EXPERIENCE

Software Developer Co-op @ Intuit

May 2020 – Present

- Developing in Java and Go to improve internal metrics on the Observability team for QuickBooks Online product
- Creating API in Go by writing a YAML parser, implementing CRUD functions, and configuring an LRU cache
- Used Micrometer and Hystrix (Java Spring) to create a filter for unnecessary data to improve readability of metrics

Backend Web Engineer @ BusRight, Inc

November 2019 - Present

- Improving web API by adding new features, enforcing test-driven development, and increasing efficiency
- Developed password reset process by adding functionality to get info from database & send emails via SendGrid
- Enforced persistent notifications by writing endpoints to get/send notifications to collections in Cloud Firestore
- Added Cloud Functions for daily database backup and profile picture functions triggered on user deletion/creation

Full-Stack Developer @ Sandbox at Northeastern

September 2019 - Present

- Maintaining and improving SearchNEU, a React/Node website that facilitates searching for classes at NEU
- Implementing changes to ensure data on site is accurate, durable, and accessible for over 50,000 unique users

Core Team – Sponsorship @ HackBeanpot Inc

May 2019 – Present

- Engaged in agile environment to organize annual hackathon for approximately 200 Boston students
- Devised sponsorship packet and worked with dozens of companies to raise over \$20,000 in financial backing
- Led team of three in revamping judging system for students' projects to be more holistic and efficient
- Designed and implemented algorithm for scheduling to resolve shortcomings with prior technology

Mobile Application Development Intern @ DoubleBridge Technologies

July – August 2019

- Researched and presented use of Android Studio for mobile development in Java to team of three
- Developed application that performs CRUD operations on MySQL database using REST API and PHP framework

PROJECTS

SearchNEU (NodeJS, React, Typescript, Cheerio, PostgreSQL)

September 2019 - Present

- Moving data to relational database (PostgreSQL) by creating data models using Sequelize ORM
- Developed toggle and dropdown components in React to improve loading times ~30x and enable filtered search
- Rewrote scraper classes that produce info from colleges' sites with Cheerio implementation of jQuery
- Refactoring JavaScript backend and enforcing reliability using Jest framework and snapshot testing

Emojiify (Google Cloud API, Twilio API, NodeJS)

November 2019

- Built program that translates text message from English into emojis using Twilio's Programmable SMS
- Trained dataset that classifies content using custom categories with Google's AutoML Natural Language API
- Developed using Node to integrate Twilio API and send responses based on result of Python script

CrimePot (Python, Flask)

February 2019

- Implemented Google Maps API with HTML/CSS/JavaScript to place markers representing crimes on map
- Performed HTTP requests using Flask microframework to retrieve data from CKAN action API
- Filtered through JSON data based on user parameters and then converted to GeoJSON in Python
